No information stated in the Contracto whitepaper constitutes legal, financial, tax, or other advice.

The whitepaper shall not be relied on for any investment settlement or be considered a form of recommendation.

We strongly advise that you consult appropriate specialists whom you trust for any decision making on your part.

Any person who means to purchase LOCK tokens should rigorously evaluate the risks and conjectures commonly associated with cryptocurrencies. Regulatory measures, investigations, or actions taken in the crypto world may affect LOCK tokens.

However, Contracto or any of its associates shall not be held responsible for any direct or indirect loss or damage caused by any changes in the crypto market.

The LOCK whitepaper is not meant to constitute or correlate in any way, nor should it be considered an offering of securities in any jurisdiction.

Contracto reserves the right to adjust, add, or remove any information of this whitepaper at any time. The whitepaper may also change due to new regulatory and compliance requirements from any applicable laws in any jurisdiction.

The roadmap written in this whitepaper is subject to amendments.

That said, Contracto roadmap should not be relied upon as a promise or representation regarding the future.

Any updated version of the whitepaper will be dated and published on our official website.

Abstract

Everything is heading in the wrong way. It's all happening in an uncontrollable way, and you can't trust anyone.
Decentralization was intended to eliminate third-party intermediaries between transactions, but individuals are demonstrating on a daily basis that laws are required to repair this environment.
Last year alone, there were over 80,000 cryptocurrency frauds. Investors lost 9 million USD each day over a 9-month period, from October 2020 to June 2021.
It's a disastrous situation in which most investors are scared to invest and more fall into traps to maximize their return on investment.

More and more people are entering the cryptocurrency industry, only to fall into traps. Traps that could have been avoided if we had all worked together.
It is all of our responsibility, as those who operate in this sector on a regular basis, to inform newcomers about the hazards that exist in this environment.
It has gotten to the point where investors are discovering new animal names based on cryptocurrency.
Honeypots are marketed everywhere by so-called legitimate websites that we use on a regular basis.

To most of us, Binance Smart Chain appears to be a zoo.
Projects that achieve a market capitalization of $100 million without having even a basic idea of what they want to develop.
Developing the next NFT marketplace or decentralized exchange is no longer considered innovative.
Wearing a suit and tie and strutting in front of a laptop is hardly professional, especially since most have bad intentions.
When someone invests in your idea, they are putting their trust in you.
Their hard-earned money is at stake; they work for it, and no one has the right to steal it.

Most investors rely on their own research to tell the difference between a rug and a decent idea.
It's been difficult to recognize diamonds lately. Most investors invest and then label it a loss. That's how awful the ratio of a decent project to a rug is.

But it doesn't have to be this way. No, not until we all do something about it.
Don't misunderstand, we're not against animal tokens.
We are opposed to animal tokens that have no use case, no established track record, no background in what they claim to be doing, and provide no insurance other than the rewards/reflections they have to give you.

We've come up with an excellent approach to assist you in this matter.
If we educate and show everyone what legitimate projects are and what rugs are, in a short period of time, everyone will be able to tell a rug from a diamond.

The future of Dappsy.io & Contracto.org

Contracto is not a straightforward project in this pool.
Contracto has arrived as a result of Dappsy's presence.
Dappsy is the latest Crypto Social Network to be introduced next year.
We are bringing communities together in a fantastic and inviting environment for all crypto communities.

A DeFi Social Network that anyone, including anonymous users, can utilize.
We have amazing things set aside for everyone, and the roadmap is lengthy.
The first stage in creating a fantastic environment, particularly a social network for crypto communities, is to ensure safety.

We don't know each other, yet we trust one other because of Dappsy.
Contracto is the first step toward putting a roadmap of projects and features in place.
By gaining the trust of investors, we are able to expand and offer more projects and utilities to this market.

We created Contracto to keep our community safe.
These audits set the road for all safe and exceptional projects to receive the confirmed tick in Dappsy.

Verified projects have extra features and can be identified as partners in our projects.
We have embarked on a new age, one of immense accomplishments for all.

Dappsy as a Crypto Social Platform

For Projects

Dappsy, as a platform, provides numerous utilities for projects that are listed:

- Verified project currencies can be added to our swapping exchange.
- Verified projects have higher priorities than unverified projects.
- Verified projects can request new features to be added to Dappsy.
- Verified projects have the possibility to be listed on CryptoHedge.
- Verified projects can receive funding from CryptoHedge.

For Investors

Our primary focus is on our investors. All initiatives that benefit to our investors:

- Find new and reliable projects.
- Join a community of new and experienced investors looking for the greatest investment opportunities.
- Swapping exchange for all projects listed and beyond using APP.
- Internal Exchange using APP .
- Communicate quickly with other investors regarding new projects.
- You already benefit from Contracto and CryptoHedge if you own APP.
- Internal wallet for sending APP to friends and colleagues.
- The ability to communicate with the community anonymously. Excellent articles and courses for getting started with cryptocurrencies.
- Participate in the funding of new initiatives.
- Create your own project and become a part of Dappsy community.
- Sponsor/Promote your own projects using APP.
- Look for new team members and post job openings.
- Buy/Sell NFT's using APP.

1. Universal Features

Dappsy, as a social network, includes features that are comparable to those of other networks. These features are:

- Anonymous posts
- Audio Posts & Comments
- Polls
- Followers System
- User Timelines
- Hashs (Hashtags)
- Report Content
- Multi-Language
- Chat System
- Job Listings
- Copy Trading (Custom Feature)
- Custom Avatars (Custom Feature)
- Fiat to APP (Custom Feature)
- User Badges (Custom Feature)
- Smart Contract Deployment (Custom Feature)
- Crypto Wallet (Custom Feature)
- Staking (Custom Feature)
- Farming (Custom Feature)

Our community may recommend additional features to integrate on the platform as time goes on. This is our responsibility to make Dappsy as investor-friendly as possible.

Introduction

"Social engineering bypasses all technologies, including firewalls." Kevin Mitnick

You've probably seen a lot of auditing firms and services out there, and it's nothing new.
Even the most respected auditing firms have been unable to detect rugs and fraudsters.
Audits are no longer believed, some might say.
There is a good history of rugs passing respectable auditing agencies, and you know it, I know it, and everyone knows it.

They are not providing poor services; rather, they are employing ineffective approaches.
They examine the majority of smart contracts before making a selection.
This also comes at a high cost; most projects pay exorbitant fees for a simple audit.
These organizations audited a lot of little projects at times, and the basic question is,

"Where does all this income come from?"

Many investors have found the same teams behind multiple projects.
There is a lot of money to be earned if no one is adequately taught to recognize a scam.

You always obtain different outcomes when you use different measurements.
We are certain that the highest score will be achieved only by teams who pass all of our tests.

Why Contracto?

Because we are not centralized. Because we have many teams working on this. Because we have independent specialists that examine many aspects of the projects.
This is simple and straightforward, as seen by the token sharing on Bscscan.
Each partner and team member has their own assets, and we all work together to build Contracto.org.
There is no man behind the curtain who does everything and decides which projects are legitimate and which are not.
Several teams render their judgements, and the project receives a score based on these outcomes.
As a result, even if one of the teams wants to claim that a project is safe when it isn't, it will easily contradict the other teams.
Assume a project has a strange smart contract in its code.
The auditing team ignored this.
Other factors, such as getting the crew doxxed, rechecking their smart contract, and so on, will indicate that the project has bad intents.
All teams are autonomous, and each team member renders a final decision based on the results obtained.

Contracto Audits

Contracto Audits, as previously said, are more than just code checking.
We are quite aware with smart contracts, and there are various scanners in place that can auto-audit and check them.
Rugs, however, do exist.
Because everything in auditing is going bad.

Smart Contract Security does not imply that the owners are not plotting evil.
It means that the smart contract code is correct, but you as an investor are unaware of it. A smart contract may have been issued, audited, and then the code modified again.
You're not going to stay up all night checking to see if the developers modified the code.

A token was launched, and there was a lot of excitement. Everyone was talking about it on Twitter.
Everyone is safe now that the contract has been renounced.
Following the launch, the developers grow the LP and then rug it.
How is this even conceivable?

A renounced contract, however, does not necessarily imply that it has been renounced.
There are numerous ways to modify the smart contract so that the developer can have access to it again.
In this situation, your funds have been stolen, and you have no recourse.

Here is where Contracto makes a difference in all of these scenarios:

In addition to our own code scanners, our staff examines the smart code block by block.
To avoid the above issues, all smart contracts are tested and penetrated to the core in all scenarios.
Aside from that, the Dappsy team conducts a background check, conveys transaction moves, doxes the project's developers, conducts interviews with them and their backgrounds, checks if they are doing well, ensures that there are no actors in the background, and then concludes if they are competent enough to handle this type of project.
A project must be doxxed and give KYC documents to the Dappsy team in order to receive the highest score in an audit.

In 99 percent of cases, carpets, and scams are completely prevented.
As a result, we retain a high score on the majority of projects, and investors may invest with confidence.
Audits will be voted on by members of our community as part of the dashboard development and ranking.
Most popular projects will also be included in our CryptoHedge venture, in which we will invest in the most popular projects to ensure their success.

LOCK Token

Contracto's primary currency is the LOCK token.
This isn't just a piece of paper that will be exchanged.
Contracto is building a unique dashboard that will display all of the audited project's possible marks, their scores, certificates, votes, and so on.

Now, LOCK tokens are extremely essential, as their use case is critical to the ecosystem we are constructing.
LOCK tokens will be used to vote on projects, sponsor them, display their rankings on the dashboard, and list them in our upcoming CryptoHedge project (Decentralised Hedge Funding).

You have various choices for contributing to your favorite projects in order to enhance their visibility.

Tokenomics

Circulating Supply	1,000,000,000
Chain	BEP20
Symbol	LOCK

Buy/Sell Tax

All buys/sells are subject to transaction tax.
This tax is deducted uniformly from all LOCK transactions.

Current transaction tax is:

Rewards/Reflections	3%
Liquidity Pool	5%
Marketing Wallet*	1%
Dappsy Liquidity Pool	1%

*Our marketing wallet is: 0xa99e79a2e25555be6176baf18e31e913da279ced

This transactional tax is most beneficial to project stability. As Contracto is a component of Dappsy, a crypto social network suited for all crypto groups, 1% is provided to Dappsy Liquidity Pool from the marketing wallet.

Anti-Whale Feature

The Smart Contract includes an anti-whale mechanism, with a maximum wallet holding limit of 1% and a maximum transaction limit of 1%.
This function contributes to the project's stability while protecting the average small investor from whale dumps.

Teams Holdings

As of today, a total of 16.5% LOCK Tokens were distributed in total to all partners & developers.

Liquidity Lock

Contracto.org Liquidity Pool will be locked on fair-launch with Mudra Locker for one year.

Conclusion

Contracto aims to build confidence between investors and projects.
We want the best for all parties and are looking forward to developing a healthy and prosperous workplace.

It is critical that all initiatives be audited before they can be trusted by the public.
There is no such thing as behind-the-scenes work; developers are either kind or money is donated to charity.

Contracto.org is here to expose all of the carpets and fraudsters and to make this world a better place.

Remember:

"Social engineering bypasses all technologies, including firewalls." Kevin Mitnick
